ARAN

COMMUNITY EMERGENCY FINANCIAL SUPPORT SYSTEM

MINI PROJECT PRESENTATION

Presented by: Dhanuvarthini
III BCA B
Bishop Heber College

Register Number: 245113216.

1. INTRODUCTION

- ARAN is a community-based emergency financial support system.
- It connects people facing emergencies with community supporters.
- Users can submit emergency requests through a web application.
- Supporters can view requests and provide financial support.
- The system maintains requests, transactions and contact information.

2. PROBLEM / EXISTING SYSTEM

⚠ Difficulty in accessing help

People facing emergencies may find it difficult to reach financial support quickly.

! Scattered information

Emergency details may be shared through different communication channels.

↻ No central tracking

Requests and support activity can be difficult to manage and track.

₹ Transaction visibility

Without a centralized system, support transactions and request status are harder to maintain.

☰ Manual coordination

Managing emergency requests manually can create delays and confusion.

3. PROPOSED SYSTEM

- Centralized web-based platform for emergency financial support.
- User registration and secure login.
- Emergency request submission with relevant details.
- Community members can view and support requests.
- Support transactions are recorded in the database.
- Users can view request/support history; administrators manage system records.

4. OBJECTIVES

Connect

Connect people needing help with community supporters.

Respond

Provide a simple platform for emergency support requests.

Maintain

Maintain organized emergency request information.

Record

Record financial support transactions.

Track

Provide request history and status tracking.

Manage

Provide administrative management features.

5. MODULES

- **User Registration & Login**

  System functionality for user registration & login.

- **Emergency Request**

  System functionality for emergency request.

- **Community Support**

  System functionality for community support.

- **Support Transaction**

  System functionality for support transaction.

- **History**

  System functionality for history.

- **Contact & Support**

  System functionality for contact & support.

- **Admin Management**

  System functionality for admin management.

6. TECHNOLOGY & DATABASE

Frontend

ASP.NET Web Forms

Programming

C#

Database

Microsoft SQL Server / LocalDB

Data Access

ADO.NET

Development Tool

Visual Studio

Database Tables

Users
EmergencyRequests
SupportTransactions
ContactMessages

ASP.NET Web Forms → C# → ADO.NET → SQL Server / LocalDB

Insert your actual application screenshots in this slide or use additional screenshot slides if required.

9. CONCLUSION

- ARAN provides a centralized platform for community emergency financial support.
- It simplifies emergency request management and community coordination.
- Support transactions are recorded systematically.
- Users can track their requests and support activity.
- Admin features help manage requests, contacts and transactions efficiently.

THANK YOU
